Clinical users have usually had little formal training in the fundamental principles of nomenclature and taxonomy, and they have a limited understanding and appreciation of these concepts. Could intensified studies of 15) archaean splicing mechanisms and protein expression lead to a breakthrough in the development of fungal production hosts for heat stable secreted enzymes from these microorganisms?

The three species most frequently found in humans, P. The ascospores are forcibly extruded from the ascus. As outlined above, the need for new enzymes is huge.
