If some data were collected with privacy guarantees, how should those guarantees be interpreted if only a subset of the data, or a summary of it, is used for a secondary analysis? It is important, though, that the registries be supported over the long term or else researchers will be wary of investing the time and effort to contribute to. But these data sets had to be integrated in order to answer the question.

Frazier pointed out that as data volumes get larger and larger, at least the first part of the data. The best technology solutions require some domain knowledge along with knowledge from computer science. Many choices are made in converting raw data to their final form, and these choices must be accounted for when data are integrated.

If computations can be performed within the repository, they can be carried out. A workshop was held August, in Washington, D. The best technology solutions require some domain knowledge along with knowledge from computer science.
