Continuity – In this section we will introduce the concept of continuity and how it relates to limits. Simplify by trying to put everything in as few variables as possible before differentiating you may have to substitute some variables by solving in terms of other variables.

While it might not seem like a useful thing to do with when we have the function

Solving Trig Equations with Calculators, Part I – In this section we will discuss solving trig equations when the answer will generally require the use of a calculator. With the substitution rule we will be able to integrate a wider variety of functions. The only real requirements to being able to do the examples in this section are being able to do the substitution rule for indefinite integrals and understanding how to compute definite integrals in general.

Not that this section is only intended to introduce these two concepts and not to compute integrals in this section will tend to be those that do not require a lot of manipulation of the function we are integrating in order to actually compute the integral.
