There was not a single case of eosinophilic folliculitis.

Participant characteristics are presented in Table 2.

These were not performed on any cases, however, as none had histopathologic

level sections were obtained if inflammatory infiltrates were

not present in the initial sections or if infiltrates were

present around pilosebaceous units but the pilar canal of the

affected follicle was not adequately displayed. Demonstration

of the Th1 to Th2 cytokine shift during the course of HIV-1

infection using cytoplasmic cytokine detection on single cell

level by flow cytometry.
