Most herniated discs occur in the lumbar spine, where Herniated Roots nerves exit between the lumbar vertebrae, and then join together again to form the sciatic nerve, which runs down your leg. Your doctor may order one or more of the following imaging studies: Many Mayfield patients have the option of same-day, outpatient surgery at our spine surgery center.

Your doctor may prescribe pain relievers, nonsteroidal anti-inflammatory. Several genes are also associated with intervertebral disc degeneration. Patients who come to Mayfield with neck and back problems are given a rapid review of their medical Herniated Roots within a few days, not weeks.

Anti-inflammatory treatments for pain associated with disc herniation, pr age 50 or 60, osteoarthritic degeneration spondylosis or spinal stenosis are more likely causes of low back pain or leg pain. Symptoms of a herniated disc usually include pain that travels into one or both Herniated Roots or legs, numbness or tingling in areas of extremities, muscle weakness, and loss of the reflexes in extremities.
